

Be a Great Neighbour—Silence the Horn!

Did you know?

Honking your horn when locking your car:

- Is startling and stressful for people with mental and physical health challenges; sensory disorders; on the Autism Spectrum; or experiencing life stress
- Is disruptive for shift-workers, parents getting kids to sleep, the self-employed, and birds/animals
- Creates an unpleasant sound environment in our neighbourhoods
- Makes it less likely people will respond to the horn honk when it is actually needed in a traffic situation—risking everyone’s safety

See your car manual if you need more instruction on how to avoid using this feature.

For health, for safety,

to be a great neighbour:

**Avoid using your horn when
locking your car!**
